

Getting A New Smile Is
Not A Hidden Secret
Anymore...

ODS ALIGNERS 

The Binary Aligner System

What is ODS Aligners™?

ODS Aligners™ is an Aligner system for those patients who want a gentle, fast and less conspicuous way of straightening teeth. ODS Aligners™ uses low forces and softer plastics to move teeth efficiently. The ODS Aligners™ system is the only system that comprises two types of transparent aligners for each treatment step. These two types differ from one another in both their composition and the amount of pressure they exert. This innovation is called the Binary Aligners® system.

Advantages of ODS Aligners™

- An aligner system developed by an orthodontist.
- High quality tooth regulation.
- Low forces that help to achieve better clinical results.
- Latest technology.
- Treatment guidance and treatment monitoring by a team of experts throughout the entire treatment.
- Treatment evaluation report* after each phase.
- Pre-formed attachments.
- Interactive 3D-digital set-up for treatment approval (VDS*).
- An appliance that is comfortable for the patient.
- Cost-effective.

*If requested.

FACTS

ODS Aligners™ are designed by expert orthodontists with experience of over 10,000+ cases.

ODS Aligners™ minimizes tooth lag and thereby decreasing treatment duration by avg. 30%.

ODS Aligners™ are manufactured with high performance materials and cutting-edge techniques. The result is an extremely effective method of orthodontic correction. The ODS Binary Aligners® system represents an important step forward safety-wise, aesthetically, and technologically in the field of orthodontics.
